In order to use the flexbox, we need to create a container for our elements :
Then we must give that container a DISPLAY : FLEX

Flex container properties :

Properties	Definition	values
Flex-direction	which direction the element will be displayed	column, row, column-reverse, row-reverse
flex-wrap	whether we want to wrap the elements or not	wrap, nowrap, wrap-reverse
justify-content	align the flex items	center, flex-start, flex-end, space-around, space-between,
align-items	align the flex items	center, flex-start, flex-end, stretch
align-content	align the flex lines	space-between, space-around, stretch

IF DISPLAY : ROW - JUSTIFY CONTENT (X) ALIGN ITEMS (Y)
IF DISPLAY : COLUMN - JUSTIFY CONTENT (Y) ALIGN ITEMS (X)
