DATALIST TAG :

- specifies a list of pre-defined options for an <input> element.
- used to provide an "autocomplete" feature for <input> elements. Users will see a drop-down list of pre-defined options as they input data..

TAG	DESCRIPTION
<datalist> </datalist>	/

- We must have an input that takes an attribute list = 'datalist id'.
- We used the option tag to fill the elements of the datalist.
